

Demo Kits

We have several demo kits available. Nothing like an actual device to help the patient / MD understand oral appliance therapy.

Written By: Patrick Tessier

Step 1 — dreamTAP / myTAP Counter Display

- This demo kit is specifically designed to grow a DSM practice organically.
- It's small with a 6"x 9" footprint. So it can fit pretty much anywhere in a practice. Operatories, Waiting rooms, etc.
- These are actual appliances on eye catching blue translucent models

Step 2 — TAP PAP CS demo kit

- This demo kit is to help grow a DSM Practice with referrals from MDs
- It comes in a plastic "bucket" with handle. The design allows the clinician to grab the demo kit on the way to meet with the referral source.
- This combination therapy device is the physical manifestation of two branches of medicine working together.
- By presenting this to an MD, the clinician can introduce OAT without discussing the negative aspects of CPAP.
- It allows the relationship to begin on a collaborative foundation and grow from there.
- Most Dentists report that they experience many referral cases as a result. Almost exclusively as straight OAT cases.
